1. Claims 1, 3, 5-14, 16, 18-25 and 43 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Claims 1, 5-12, 14, 18-25 and 43 recite, among other features, a plurality of resetting signal/control lines to which resetting/control signals are applied; and a resetting signal/control line driver for applying said resetting/control signals to said resetting signal/control lines; wherein said pixel has a resetting/control transistor having a third drain electrode, a third source electrode, and a third gate electrode, and a parasitic capacitor is formed between said first electrode and said second electrode; wherein said third drain electrode/said third source electrode is connected to said second source electrode, said third source electrode/said third drain electrode is connected to said second power line, said third gate electrode is connected to said resetting signal/control line, and said resetting/control transistor performs on/off control of a conduction state between said second source electrode and said second power line based on said resetting/control signal; and wherein said control means turns on said resetting/control transistor thereby to discharge said holding capacitor and said parasitic capacitor, and thereafter turns on said selection transistor.

The Prior art, whether alone or in combination, does not disclose the above limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
